

## Intensifier Hollow Screw Update

<b>Purpose:</b>	Jet Edge is releasing an updated low pressure poppet screw to use on Hero series, iP series, and previous 55/60K series intensifier pumps.
<b>Systems:</b>	All intensifier pumps that use the updated low pressure poppet screw are listed in the Low Pressure Poppet Screw #112437 Reference Chart on the following page.
<b>Details:</b>	<p>Jet Edge is releasing a new hollow screw (#112437) that is used in most intensifier pumps. The hollow screw is backwards compatible with assemblies that used #104431 and is now capable of handling a higher torque specification, which increases the clamping force. The hollow screws also have a visibly different head style to easily differentiate between the old and new parts.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>104431</p> </div> <div style="text-align: center;">  <p>112437</p> </div> </div>
<b>Benefit:</b>	With the updated fastener, we are able to increase the clamping force of the poppet assembly, leading to easier servicing without the risk of damaging the fastener or the check tube. New torque spec: 65 +/- 5in-lbs (7.4+/- 0.6 N-m).
<b>Order Now:</b>	Call Jet Edge (800)-JET EDGE or email <a href="mailto:parts@jetedge.com">parts@jetedge.com</a> to learn more about this Technical Bulletin. Jet Edge recommends that your stock is checked, and previous hollow crews (#104431) are removed from your stock and disposed of. If you are signed up for the Jet Shield Preventative Maintenance program, the updated parts will be shipped with the rest of your components.
